system identification is a special section of the international federation of automatic control ifac journal automatica that contains tutorial papers regarding the basic methods and procedures utilized for system identification topics include modeling and identification step response and frequency response methods correlation methods least squares parameter estimation and maximum likelihood and prediction error

methods after analyzing the basic ideas concerning the parameter estimation methods the book elaborates on the asymptotic properties of these methods and then investigates the application of the methods to particular model structures the text then discusses the practical aspects of process identification which includes the usual general procedures for process identification selection of input signals and sampling time offline and on line identification comparison of parameter estimation methods data filtering model order testing and model verification computer program packages are also discussed this compilation of tutorial papers aims to introduce the newcomers and non specialists in this field to some of the basic methods and procedures used for system identification

the synthesis during the present decade of different arts and sciences to form oncology as a multidisciplinary subject is of profound importance for coordinating the clinical and research efforts to control a number of diseases that cause high mortality and morbidity in the human race and to elucidate their causation these diseases traditionally have been grouped together under the general term of cancer without any scientific reason and irrespective of many differences existing between them the word cancer because it is synonymous with diseases that cause suffering and death naturally generates fear in people throughout the world cancer fortunately has a changing face caused by the realization that these diseases are different diseases with variable etiology and prognosis they need different kinds of treatment and even prevention is a practical proposition the time has therefore come to delete the term cancer from our terminology as unscientific and unhelpful and to substitute oncological diseases governed by the system of knowledge designated oncology this conforms also with the designations used for other groups of diseases in the divisions of oncology an important place is held by surgical oncology because many oncological diseases require surgical treatment alone or in combination with radiotherapy and chemotherapy combination therapy is being used effectively for an increasing number of these diseases and this trend will become more pronounced as chemotherapy develops the results achieved with available chemicals and present dosage schedules are impressive
